Babstoken is a decentralized easy-to-reach currency that provides protection and power to billions of young people in today's world.

This document was created on a decentralized blockchain that has existed for many years, a low-risk cryptocurrency, a smart contract platform that aims to create a new opportunity for young people to innovate in financial services.

The Internet and mobile broadband, which emerged as a result of the developments in our world in the twenty-first century, reached billions of people around the world in order to reach the world's information, high-quality communication and a much lower cost, more convenient service range, thus empowering them. These services can be accessed from almost anywhere in the world using computers, tablets and smart phones.

This connection, made with different devices in different regions, has provided economic strength by enabling more people to access the financial ecosystem. By working together, technology companies and financial institutions have found solutions that can also help increase economic empowerment in the world. With the solutions found, now anyone who owns a smartphone can communicate free of charge worldwide with a basic data plan. Technological advances have brought access to financial services, cost, reliability and the ability to send money smoothly. All over the world today, people with little money are paying more for financial services. In order to be able to use its hard-earned income in purchasing basic needs, it decreases the credit card transactions provided by the banks, money transfer and money transfer costs with fees such as excessive withdrawal.

All currencies in the world, except crypto coins, are managed by an authority. Every transaction is made through banks with high fees, and it often takes time for the money to reach the recipient.

For this reason, with the new world created by technological developments, crypto currencies created thanks to block chains give people the freedom to send and receive money with just a QR code or a single click on an online wallet. All transfers take negligible time, there are no shocking transaction fees like banks, and money is sent directly from person to person without intermediaries; the only thing needed for this is an internet connection.

In addition, today most of the traditional currencies are fraudulent, but since the crypto currencies created on the blockchain are secured by the blockchain technology as well as the mathematical transactions processed in the algorithm and various defense mechanisms, fraud cannot be done as in traditional currencies.

Most of our efforts under this program include examining new approaches and developing innovative ways to implement them.

BABSTOKEN ABOUT

Babstoken is built on the cryptocurrency tron network in accordance with the standard methods of the TRC-20 interface. Although it is aimed to create its own blockchain platform in the future, it will be added as a digital asset running on this platform. The current mechanism has been arranged to allow the smart contract to be updated in order to fix bugs or add new features, depending on the tampering of Babstoken in its creation. The Babstoken currency, with the abbreviation (BBS), is built on the tron network. It includes functionality and surveillance that are important for a securely regulated, compatible and stable cryptocurrency.

As Babstoken management;

As we embark on this journey with young people around the world, we think that it is important to align and accelerate the society and ecosystem that we want to advance this initiative, and to share among young people while preserving our beliefs.

We think that many people should have access to cheap capital with less financial loss in financial services.

We believe that people have a natural right to control their wealth, which is the equivalent of their legally earned labor.

We believe that the Internet of Things and Cryptocurrency's global open, low-cost movement with instant transfers with new technologies created will create great economic opportunities and more trade worldwide.

We believe that Cryptocurrency and financial infrastructure should be designed and managed as a public good in all countries of the world.

We believe we all have a responsibility to advance financial inclusion and continuously support the integrity of the ecosystem.

BABSTOKEN AND RESERVE INFORMATION

We believe that the world needs a global and digitally designed currency that carries the attributes of the best currencies; Aiming at stability, low inflation, wide global acceptance, the Babstoken currency is designed to embrace how money works for people in the world and the need to help global needs and protect people from financial bullying.

If we think of the blockchain system as a cloud, we want to play an active role in the development of the digital ecosystem on the world as a raindrop as a raindrop, so we can create 100,000,000 units on the Tron Network with the standard of the TRC-20 interface and create a digital currency as a new currency. We need you, valuable people, to help us develop and gain trust by being developed to serve you better by entering the asset market, and to be widely accepted by analogy with the infancy period of human beings. We want your support to have a say in the world where the popularity of the blockchain system and digital assets is increasing.

BABSTOKEN BLOCKCHAIN AND MINING

Although Babstoken was built on the crypto currency tron network in accordance with the standard methods of the TRC-20 interface, our mining work to be created by our developers over the existing network is still ongoing.

BABSTOKEN ROADMAP

***2021 2 Quarter
TOKEN GENERATION***

2021 4 Quarter

***Ensuring
Babstoken social
network
formations,
participation and
promotion of new
business partners***

***2022 2
Quarter***

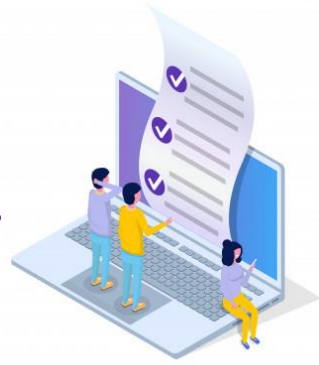

***Babstoken
Mining
Preparations
and coin
distribution
studies***

***To carry out updating studies
in line with the plans made,
to end the promotion***

2021 3 Quarter

***Website Design and the
process of reaching
people***

2022 1 Quarter

***Opening Babstoken
subscriber records***

***Voting and evaluation studies for
innovations project approval that
needs to be done by our
subscribers***
